

Bar Graphs help us see how many or how often something happens in each category.

What kind of data?

categorical data = data in the form of names or labels, not numbers

ex-

Gender (Male, Female)

color (Red, Blue, Green)

Grades (A, B, C)

→ What does a bar graph show?

X-axis - categories (names)

Y-axis → count of freq (numbers)

→ Simple Bar chart:

| Eye Color | No of Students |
|-----------|----------------|
| Blue      | 60             |
| Green     | 120            |
| Brown     | 150            |
| Hazel     | 100            |
