

⇒ Histogram

A histogram is used to show the distribution of numerical (quantitative) data.

It shows:

- How numbers are spread.
- Where values occur more frequently.

ex: student Marks:

Marks Range	Students
0-10	2
11-20	5
21-30	8
31-40	4

Mark Range	class Band	Num of students
0-10	0.5-10.5	2
11-20	10.5-20.5	5
21-30	20.5-30.5	8
31-40	30.5-40.5	4

→ why bars touch in histogram?
Because :-

1. data is continuous

2. there is no gap b/w ranges.

class	Preval	RT	c.o.f
10-20	25	$\frac{25}{75} = 0.3$	25
20-30	40	$\frac{40}{75} = 0.5$	$40 + 25 = 65$
30-40	10	$\frac{10}{75} = 0.2$	$65 + 10 = 75$
	$\Sigma 75$	$\Sigma R = 1$	Preval = c.f.

RT never exceeds 1
